**Ballistic
Threat
Management**

Ballistic threat protection is vitally important to our first responders every day worldwide.

The *Mobile Armored Shield* is an *essential tool* for tactical field use.

MAS – 3815

Armored Mobility Inc.

Phone: 831-430-9899

Armored Mobility Inc.

designs, manufactures and sells a Mobile Armored Shield (MAS) engineered to be attached to the exterior of a vehicle or carried by an individual on foot as a defense against ballistic threats. **The MAS meets NIJ Standard 0108 Level III ballistic resistance standards.** Weighing only 14 pounds, the MAS-3815 is designed for tactical mobility. This versatile product floats for use during water rescues. The integrated strap system allows the MAS to become an emergency stretcher. For added flexibility and protection, multiple panels can be quickly and easily joined together to form an expanded barrier.

PRODUCT

The MAS is offered in various custom dimensions and shapes; the typical size is 15 inches by 38 inches. The shields are made from Dyneema, a super strong polyethylene fiber produced using a patented gel spinning process. This remarkable fiber is up to 15 times stronger than steel and is weight-for-weight 40% stronger than competing aramid fibers. Its unidirectional lightweight composite provides superior anti-ballistic protection for both personnel and vehicle protection.

Functionality of the MAS is achieved by the insertion of the armor protective material, Dyneema, into a patented-designed military ballistic grade material creating an outer jacket to encompass the shield. The carrier can be designed to customer specifications. Special magnets allow the secure attachment of the MAS to a vehicle. The durable MAS is manufactured with materials that are resistant to temperature extremes and moisture.
